#### Bootstrap

jan.schulz@devugees.org

#### Agenda

- 1. Introduction
- 2. Components
- 3. Grid System

#### 1. Introduction

Bootstrap?

#### 1. Introduction

- <u>Bootstrap</u> is a free front-end framework (HTML and CSS) for faster and easier web development
- Bootstrap is famous for being developed with components that have the ability to follow the properties of responsive designs

#### 2. Components

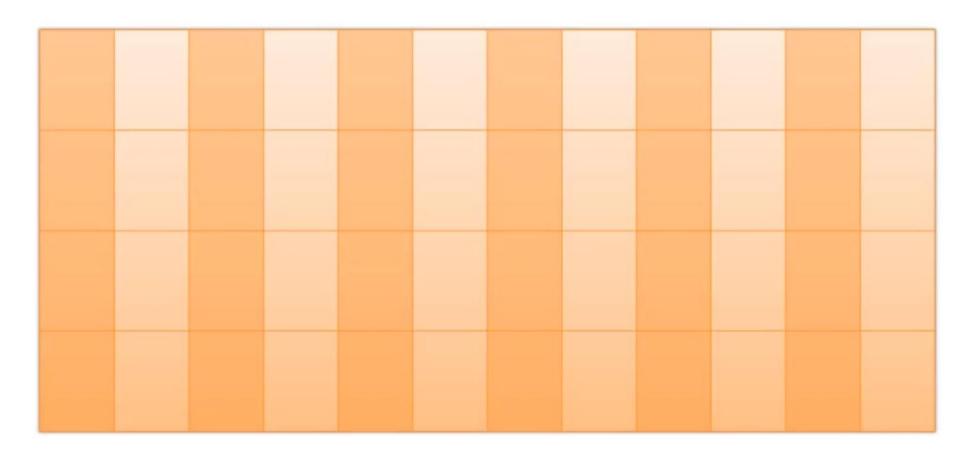

- Bootstrap provides a huge collecton of predefined components for websites
- Go to https://getbootstrap.com/docs/4.0/compon ents/forms

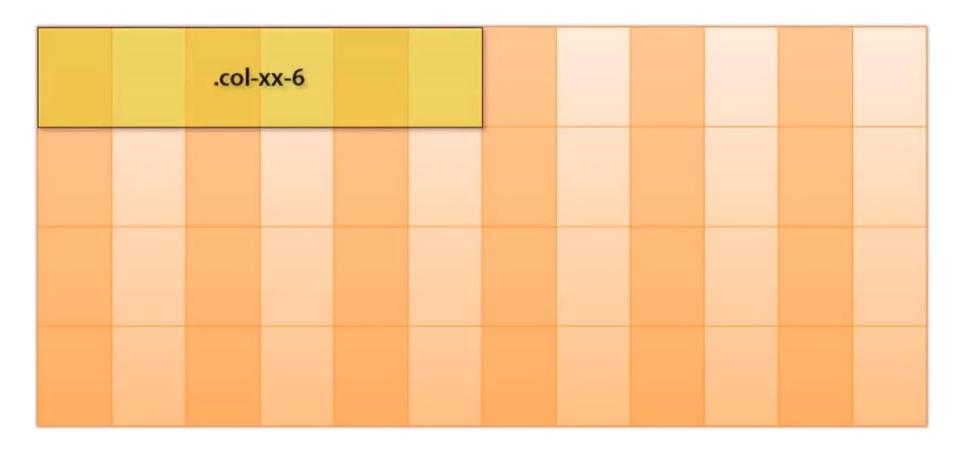

#### 2. Components

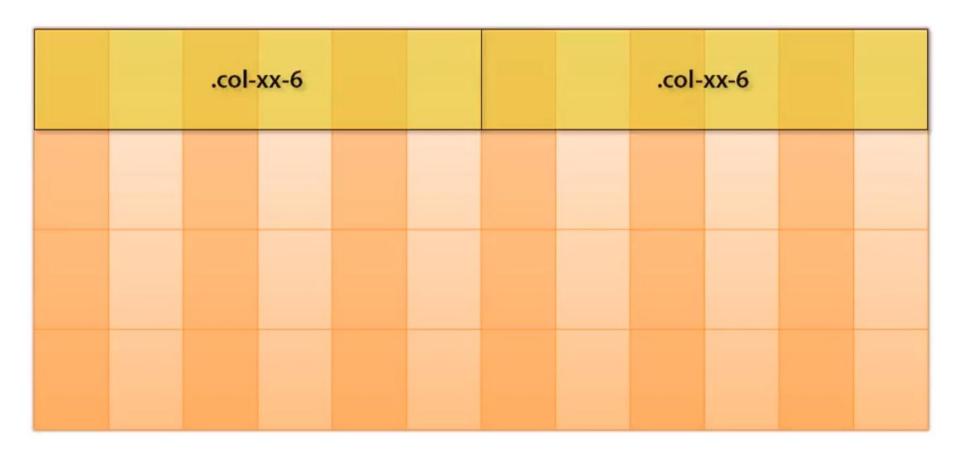

#### <u>Tasks:</u> (separate each task with a horizontal line)

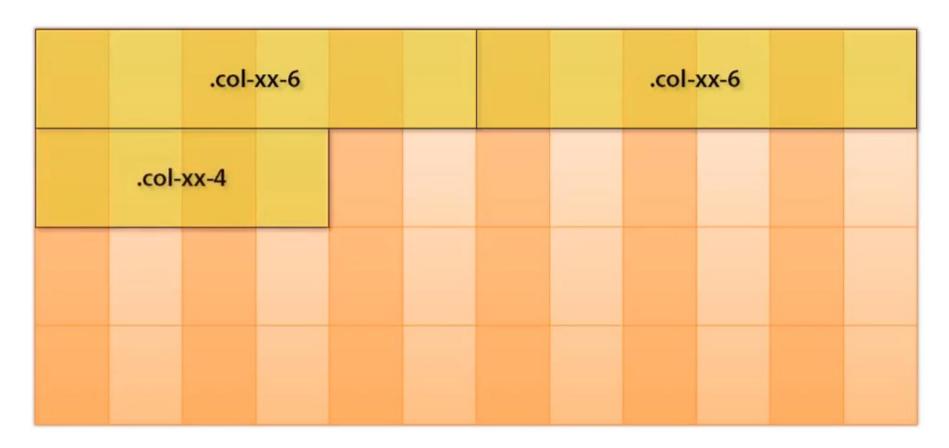

- 1. Create a folder bootstrap\_2 with an index.html.
- 2. Include Bootstrap 4 libraries by CDN or download them locally.
- 3. Create a container.
- 4. Create a login with username and password inputs, two buttons "Login" and "Forgot Password".
- 5. Create a signup with firstname, lastname, address, email, email-repeat and one button "Register Now".
- 6. Create a Pizza Order form with five Pizza types (Margherita, Regina, Capriciosa, Calzone, Diavolo) and four sizes (small, medium, large, extra-large)
- 7. Download three pictures of a nice beach. (beach1-3.jpg). Create a slide show of them using the carousel component.
- 8. Create a drop-down menu "Order by" and give it three options: Revenue, Costs and
- 9. Create a Navbar with three navigation items Home, Users, Settings and Logout. Also add a search box on the right side of it.

	Extra small <576px	Small ≥576px	<b>Medium</b> ≥768px	<b>Large</b> ≥992px	Extra large ≥1200px		
Max container width	None (auto)	540px	720px	960px	1140px		
Class prefix	.col-	.col-sm-	.col-md-	.col-lg-	.col-xl-		
# of columns	12						
Gutter width	30px (15px on each side of a column)						
Nestable	Yes						
Column ordering	Yes						

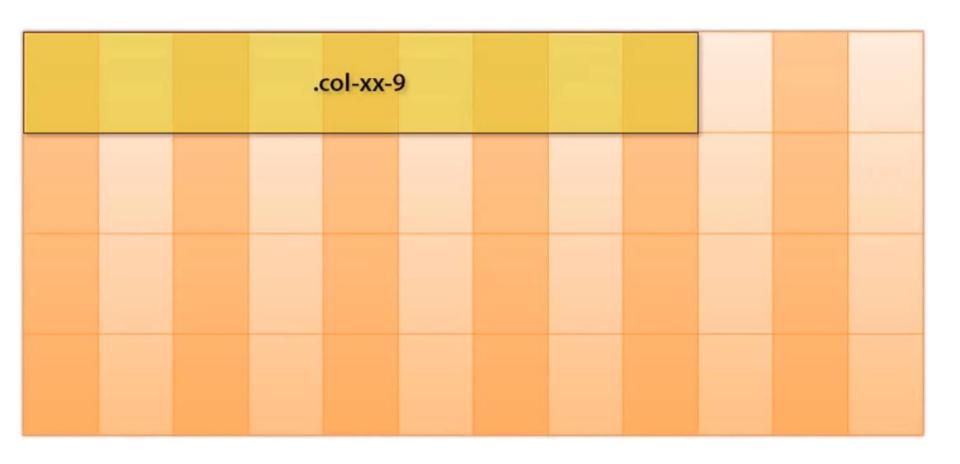

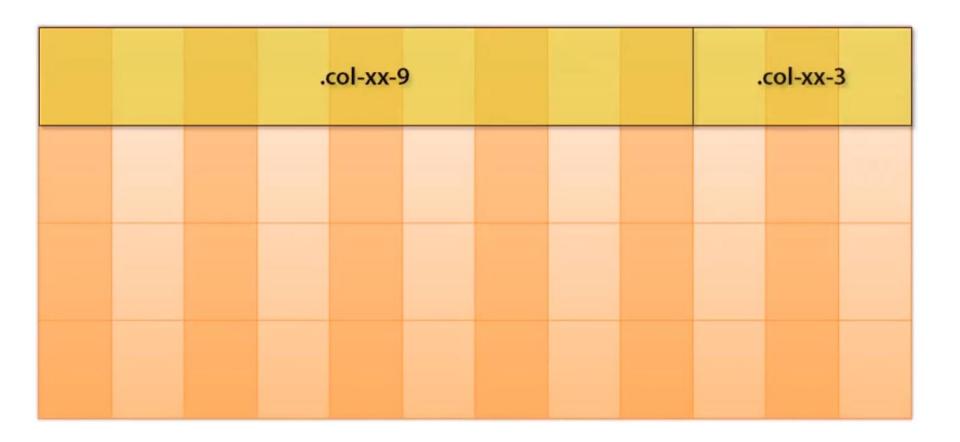

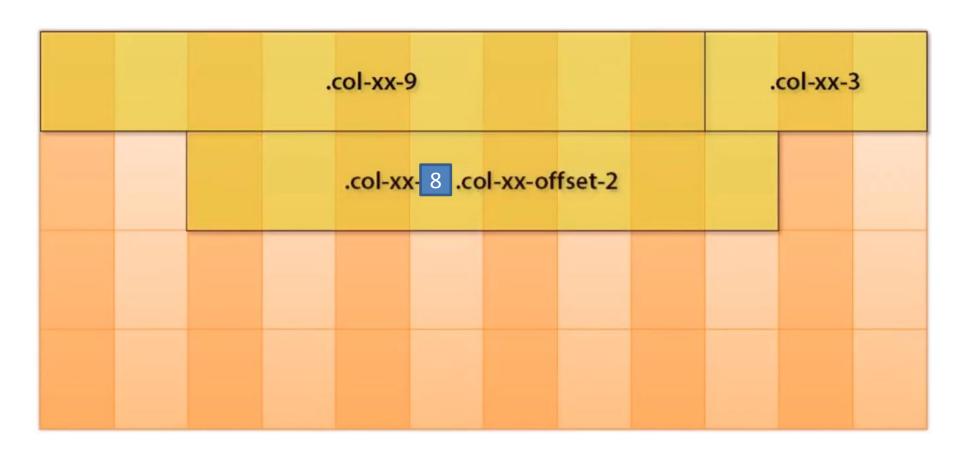

.col-xx-6		.col-xx-6
.col-xx-4	.col-xx-4	.col-xx-4

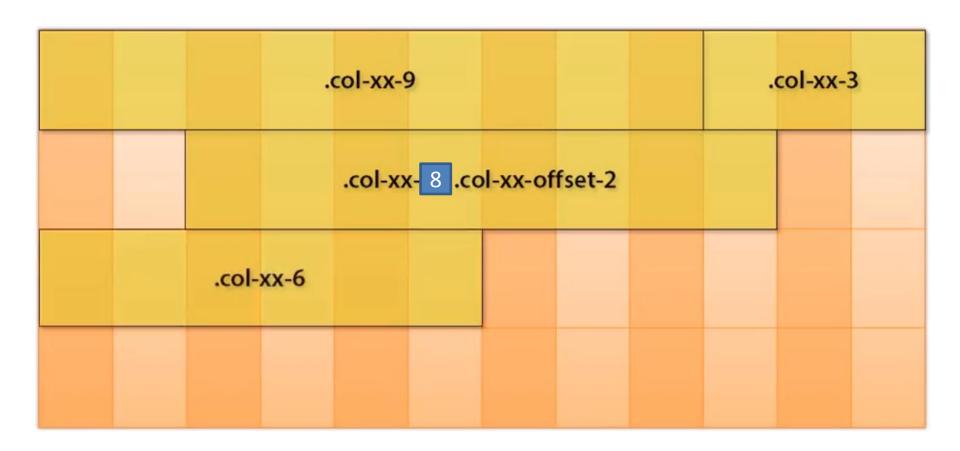

.col-xx-6		.col-xx-6
.col-xx-4	.col-xx-4	.col-xx-4
.col-xx-3		

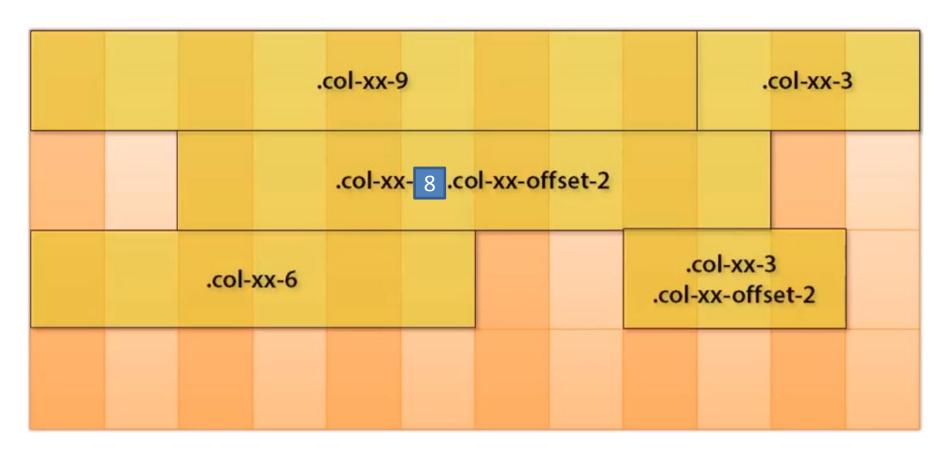

.co		.col-xx-6				
.col-xx-4		.col-	xx-4	c-4 .col-xx-4		
.col-xx-3		.col-xx-3	3 .	.col-xx-3		
.col-xx-2 .co	l-xx-2	.col-xx-2	.col-xx-2	.col-xx-2	.col-xx-2	

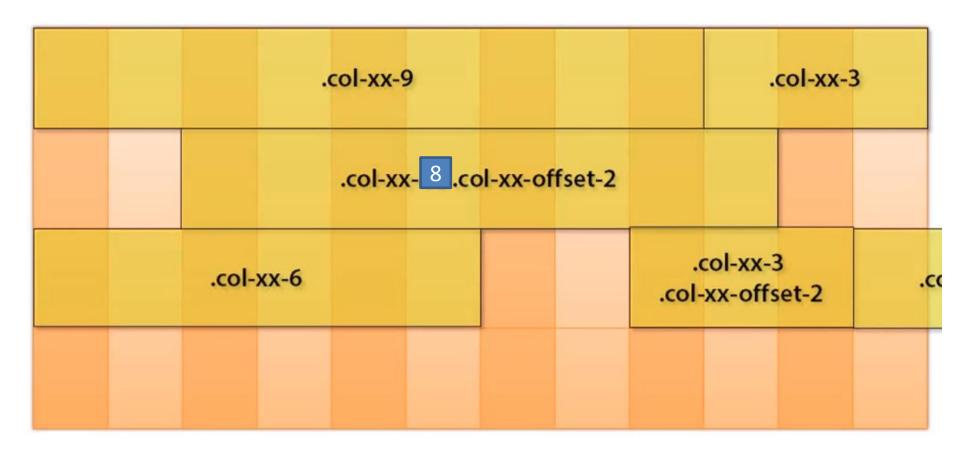

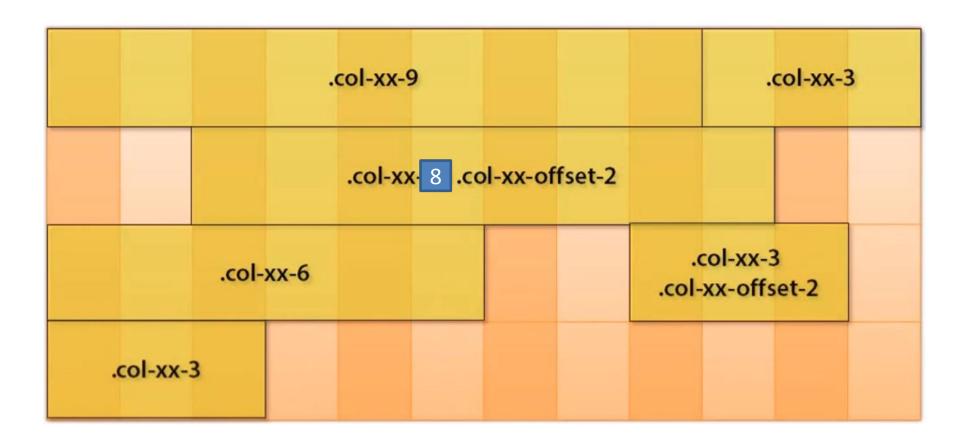

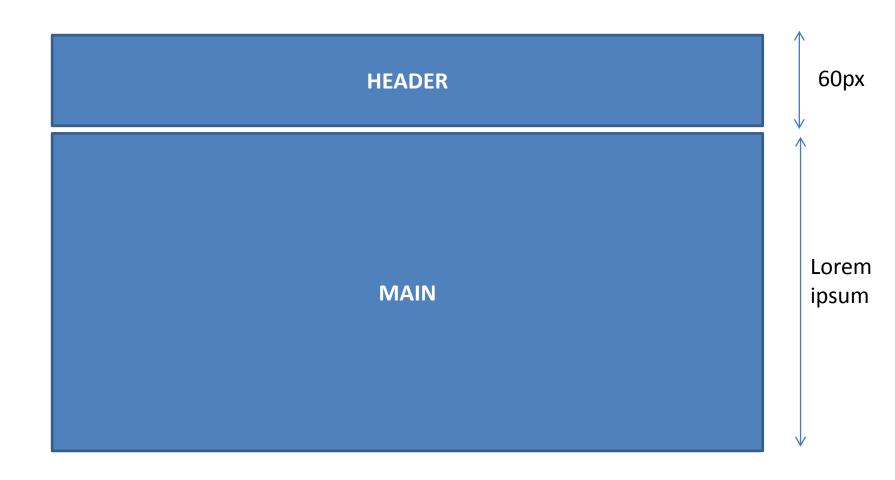

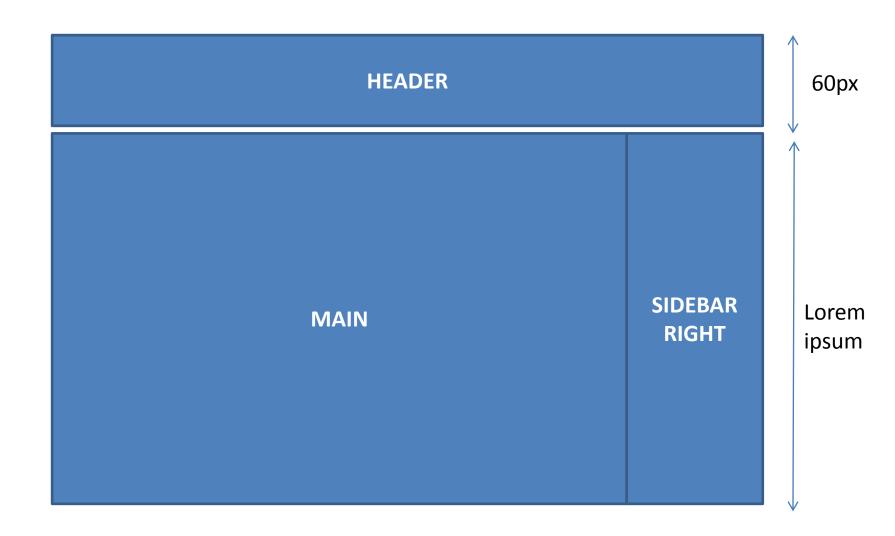

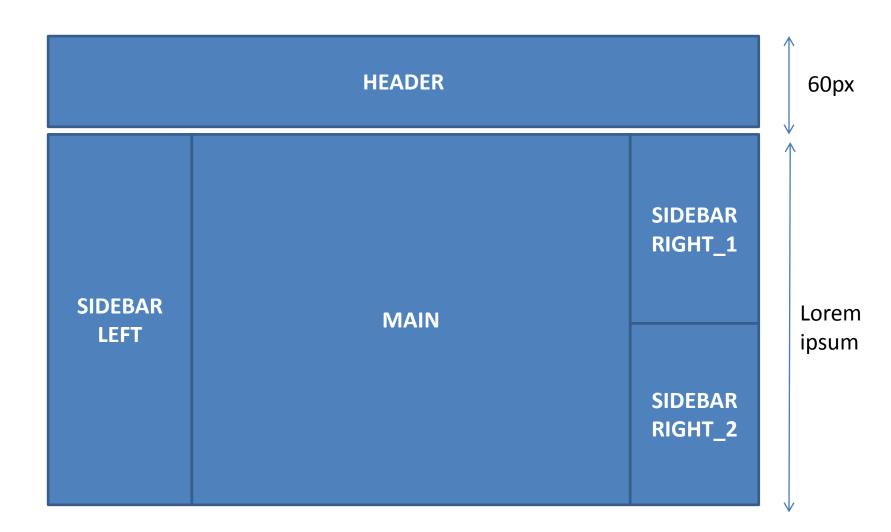

- XS < SM < MD < LG < XL
  - XS scales up to XL
  - XL does not scale down to XS

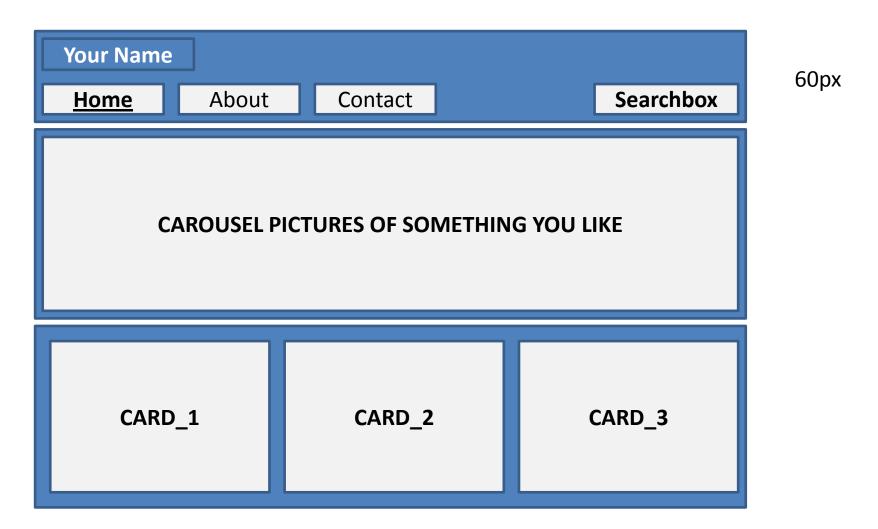

- 1. Rows must be placed within a .container (fixed-width) or .container-fluid (full-width) for proper alignment and padding
- 2. Use rows to create horizontal groups of columns
- 3. Content should be placed within columns, and only columns may be immediate children of rows
- 4. Predefined classes like .row and .col-sm-4 are available for quickly making grid layouts
- 5. Grid columns are created by specifying the number of 12 available columns you wish to span. For example, three equal columns would use three .col-sm-4
- 6. Column widths are in percentage, so they are always fluid and sized relative to their parent element
- 7. The biggest difference between Bootstrap 3 and Bootstrap 4 is that Bootstrap 4 now uses flexbox, instead of floats. One big advantage with flexbox is that grid columns without a specified width will automatically layout as "equal width columns" (and equal height). Example: Three elements with .col-sm will each automatically be 33.33% wide from the small breakpoint and up. Tip: If you want to learn more about Flexbox, you can read our CSS Flexbox Tutorial
